DETAILED ACTION

Priority

1. Acknowledgment is made of applicant's claim for foreign priority based on an application filed in Germany on June 6, 2000. It is noted, however, that applicant has not filed a certified copy of the 100 27 859.0 application as required by 35 U.S.C. 119(b).

Allowable Subject Matter

2. Claims 1 and 3-8 are allowed.
3. The following is an examiner's statement of reasons for allowance.

Rossenberg clearly teaches the construction of a variable speed electrical machine comprising:

an excitation winding;

a stator winding with a small number of coils;

a converter configuration;

wherein the output electrical power is obtained when the electrical machine is operating along the resulting torque line at any operational speed.

Marumoto et al. teach the construction of a control apparatus for electric generator having a pulse-width modulation inverter, which processes a current that is inversely proportional to the number of coils of the stator winding of the electrical machine for the purpose of controlling the duty cycle of the chopper in response to the operating conditions of the engine.

The prior art of record, taken alone or in combination, fails to teach the construction of a method for operating an electrical machine for an output of electrical power comprising a converter configuration located downstream of the electrical machine, wherein:

in a range of an idle speed of an internal combustion engine, the output of electrical power takes place along a torque line independently of the a number of coils w_1 , w_2 ;

in a speed range above the idle speed of the internal combustion engine, the output of electrical power takes place via an electrical machine having a stator winding comprising a small number of coils w_2 ; and

a voltage difference between a vehicle electrical system of a motor vehicle and machine terminals is compensated for by means of a pulse-width modulation inverter configured to include semiconductor components arranged in parallel to one-way diodes, thereby enabling operation of the engine over an entire range of operation.

Dependent claims 3-8 are considered allowable by their dependence on allowed independent claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See PTO-892.
